Research Experience

DEL Lab, University of Colorado Boulder - Research Assistant	Boulder, CO
Principle Investigator/Advisor: Dr. Lei Yuan	Jan 2022 - May 2024
- Contributed 700+ hours to 3 projects investigating children’s learning mechanisms (e.g., language-guided relational attention, associative learning) and knowledge structure (e.g., place value). - Implemented and trained deep image captioning models (CNN + LSTM) in PyTorch to name multi-digit number symbols, assessed their sensitivity to the consistency of visual-verbal mappings in learning input. - Conducted systematic literature review on children’s early knowledge of place value concepts. - Modeled the structure of components of mathematical knowledge using partial correlation networks and co-occurrence networks and created network visualizations in R and Python. - Performed hypothesis testing in R using mixed effect models to assess effectiveness of various place value training paradigms. - Implemented Hidden Markov Model in Python to model eye gaze patterns and reduce noise in behavioral data. - Analyzed and visualized eye-tracking data in R via growth curve analysis, onset-contingent analysis, and divergence analysis.	

Gopnik Lab, University of California, Berkeley - Research Assistant

Berkeley, CA

Principle Investigator: Dr. Alison Gopnik | Advisor: Dr. Rebecca Zhu

June 2021 - May 2024

- Contributed 600+ hours to 4 projects studying how children comprehend, produce, and learn from various types of symbols (e.g., non-literal language, pictures, and relational words).
- Extracted 250+ million utterances from CHILDES using R to study the distribution of abstract relational words (e.g., same, different) in child-directed speech and children's production.
- Trained 5 research assistants on study-specific procedures and supervised their experimental data collection processes.
- Collected data from 50+ preschoolers (i.e., 3-5 year-olds) and 30+ adults on studies investigating how children acquire and learn from non-literal expressions.
- Administered standardized experiments online over Zoom, e.g., checking consent forms, collecting demographic information, running experimental scripts, and coding behavioral data.

Language Acquisition Lab, Johns Hopkins University - Research Assistant

Baltimore, MD

Principle Investigator: Dr. Géraldine Legendre | Advisor: Dr. An Nguyen

Jan 2021 - Dec 2022

- Contributed 300+ hours to 2 projects investigating linguistic cues that guide children to acquire syntactic variations.
- Analyzed 10 children's corpora on CHILDES using CLAN to study the distribution of different wh-questions.
- Designed and launched controlled linguistic production experiments on Prolific.
- Collected, cleaned, and analyzed 600+ recordings to extract phonetic information such as pitch and word duration.
- Applied statistical models to understand prosodic differences of English wh-questions in different contexts.
- Abstract on wh-question prosody in English was accepted as an oral presentation at the Chicago Linguistic Society annual conference in 2022.
